Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the

application.

Please amend claims 1, 20 and 38-41 as indicated below (material to be inserted

is in bold and underline, material to be deleted is in strikeout or (if the deletion is of five

or fewer consecutive characters or would be difficult to see) in double brackets [[]]):

Listing of Claims:

1. (Currently Amended) A method of projecting an image with display-

condition compensation, the method, comprising:

projecting a principal image onto a principal area of a display surface, the

display surface disposed for viewing by one or more people;

projecting an intended calibration image onto a calibration area of the display

surface when the principal image is not projected onto the calibration area;

receiving a reflection from the display surface of the projected calibration image;

comparing the received calibration image to the intended calibration image to

determine an observed difference; and

modifying projection of the principal image based on the observed difference.

AMENDMENT AFTER FINAL Serial No. 10/608.971

HP Docket No. 200207145-1

2. (Original) The method of claim 1, where comparing the received calibration image to the intended calibration image includes determining a color characteristic of the received calibration image and comparing it to a corresponding color characteristic of the intended calibration image.

3. (Original) The method of claim 1, where projecting a principal image includes projecting a principal image without a portion of the principal image corresponding to the calibration area, and projecting a calibration image includes projecting the calibration image onto the calibration area while projecting the principal image without the portion.

4. (Original) The method of claim 1, where comparing the received calibration image to the intended calibration image includes comparing an intended calibration image color characteristic to a received calibration image color characteristic corresponding to at least a portion of the calibration area.

5. (Original) The method of claim 1, further comprising: segmenting the intended calibration image into a plurality of subunits; and segmenting the received calibration image into a corresponding plurality of subunits;

where comparing the received calibration image to the intended calibration image includes determining a color characteristic for each intended calibration image subunit, determining a color characteristic for each received calibration image subunit; and

comparing the intended calibration color characteristic to the received calibration image color characteristic for at least one subunit.

Page 3 - AMENDMENT AFTER FINAL Serial No. 10/608,971 HP Docket No. 200207145-1 KH Docket No. HPCC 393

(Original) The method of claim 1, where modifying the projected principal 6.

image includes determining a correction based on the observed difference.

(Original) The method of claim 6, where modifying the projected principal 7.

image includes applying the correction to principal image data.

(Original) The method of claim 6, where modifying the projected principal 8.

image includes applying the correction to commands received by a light engine to

create the projected principal image.

(Original) The method of claim 6, where modifying the projected principal 9.

image includes applying the correction to one or more operating parameters of a light

engine used to create the projected principal image.

(Original) The method of claim 1, where projecting the principal image 10.

includes projecting the principal image from at least a first light source, and projecting

an intended calibration image includes projecting the intended calibration image from at

least a second light source.

(Previously Presented) The method of claim 1, further comprising, prior to

modifying the principal image, modifying the calibration image, projecting the modified

intended calibration image onto the calibration area of the display surface when the

principal image is not projected onto the calibration area, receiving the modified

calibration image displayed on the display surface, and comparing the received

modified calibration image to the modified calibration image to determine an observed

difference.

Page 4 -

AMENDMENT AFTER FINAL Serial No. 10/608,971

12. (Original) The method of claim 1, where comparing the received

calibration image to the intended calibration image includes:

determining a color characteristic for at least a subunit of the received calibration

image; and

determining a difference between the determined color characteristic and an

intended color characteristic of at least a subunit of the intended calibration image.

13. (Original) The method of claim 12, where modifying the projection of the

principal Image includes determining a correction configured to reduce the determined

difference between the intended and determined color characteristic, and modifying

projection of the principal image based on the determined correction.

14. (Original) The method of claim 13, where modifying projection of the

principal image includes modifying principal image data.

15. (Original) The method of claim 13, where modifying projection of the

principal image includes modifying one or more light engine commands derived from

principal image data.

16. (Original) The method of claim 13, where modifying projection of the

principal image includes modifying one or more operating parameters of a light engine.

17. (Original) The method of claim 12, where determining a color

characteristic, and determining a difference between the determined color characteristic

and an intended color characteristic is repeated for each subunit of the intended

calibration image and corresponding subunit of the displayed calibration image.

Page 5 -

AMENDMENT AFTER FINAL

Serial No. 10/608,971

18. (Original) The method of claim 12, where a color characteristic includes

one or more of an average red intensity, an average blue intensity, an average green

intensity, average color, chromaticity, color temperature and luminance.

19. (Original) The method of claim 12, further comprising capturing the

displayed calibration image using at least one of a color-sensing device, a colorimeter, a

luminance meter, a color temperature meter, and a camera.

(Currently Amended) A display device comprising:

a light engine apparatus configured to project a principal image and an intended

calibration image onto a display surface, the display surface disposed for viewing by

one or more people, where at least a portion of the intended calibration image has an

intended first color characteristic;

an optical unit configured to receive a reflection from the display surface of the

projected calibration image; and

a processor configured to

direct projection of the intended calibration image onto a calibration area

of the display surface when the principal image is not projected onto the

calibration area;

compare the received calibration image to the intended calibration image

to determine an observed difference; and

modify projection of the principal image based on the observed difference.

Page 6 -

AMENDMENT AFTER FINAL

Serial No. 10/608.971

HP Docket No. 200207145-1

21. (Original) The display device of claim 20, where the optical unit is at least one of a color-sensing device, a colorimeter, a luminance meter, a color temperature meter and a camera.

22. (Original) The display device of claim 20, further including memory connected to the processor, where the memory is configured to store the intended first color characteristic.

23. (Previously Presented) The display device of claim 20, where the light engine apparatus includes a light engine configured to project the principal image and a calibration light unit configured to project the intended calibration image.

24. (Previously Presented) The display device of claim 23, where the calibration light unit projects the intended calibration image along at least a portion of a light path along which the light engine projects the principal image.

25. (Previously Presented) The display device of claim 24, further comprising an optical device configured to insert the intended calibration image into the light path along which the principal image is projected.

26. (Previously Presented) The display device of clalm 25, where the optical unit receives the reflected calibration image along at least a portion of the light path along which the calibration light unit projects the calibration image.

27. (Original) The display device of claim 23, further comprising a first housing containing the light engine, and a second housing containing the optical unit.

28. (Original) The display device of claim 27, where the second housing is freely movable relative to the first housing.

Page 7 - AMENDMENT AFTER FINAL Serial No. 10/608,971 HP Docket No. 200207145-1 KH Docket No. HPCC 393

(Previously Presented) The display device of claim 28, further comprising 29.

an output device mounted on the second housing, the output device coupled to the

optical unit for outputting a signal representative of the received calibration image.

(Original) The display device of claim 29, where the output device and 30.

optical unit are configured to output a signal representative of a received first color

characteristic.

(Previously Presented) The display device of claim 29, further comprising 31.

an input device mounted on the first housing, the input device coupled to the processor

for inputting the signal representative of the received calibration image.

(Previously Presented) The display device of claim 23, where the 32.

processor is further configured to:

determine an actual first color characteristic of at least a portion of the received

calibration image;

calculate a difference between intended and actual first color characteristics for

corresponding portions of the intended calibration image and the received calibration

image;

calculate a correction based on the calculated difference between the intended

and actual first color characteristics; and

modify projection of at least one of the principal image and the calibration image

based on the correction.

Page 8 -

AMENDMENT AFTER FINAL

Serial No. 10/608,971

HP Docket No. 200207145-1

33. (Original) The display device of claim 32, where the light engine is

configured to project the principal image onto a principal area of the surface including at

least a portion of the calibration area, and the processor is further configured to direct

the light engine not to project the principal image onto at least the calibration area of the

surface while the calibration image is being projected.

34. (Previously Presented) The display device of claim 33, further comprising

an input device coupled to the processor and configured to be manually actuated, the

processor being configured to initiate projection of the calibration image when the input

device is actuated.

35. (Original) The display device of claim 32, where the processor is further

configured to terminate projection of the principal Image on at least the calibration area

of the surface while projecting the calibration image.

36. (Original) The display device of claim 32, where the color characteristic is

at least one of an average color, a chromaticity, a color temperature and a luminance.

37. (Original) The display device of claim 36, where the average color

includes one or more of an average red intensity, an average blue intensity and an

average green intensity.

AMENDMENT AFTER FINAL Serial No. 10/608,971

UD Docket No. 200207

38. (Currently Amended) A calibration unit for use with a projector having

selectable color compensation and configured to project a principal image onto a

display surface, the display surface disposed for viewing by one or more people and

having colortable color compensation, the calibration unit comprising:

a calibration light unit configured to project an intended calibration image onto the

display surface;

an optical unit configured to receive the reflection from the display surface of the

projected calibration image; and

an output device coupled to the optical unit for outputting a signal corresponding

to the received calibration image.

39. (Currently Amended) A display device comprising:

means for projecting a principal image onto a display surface, the display

surface disposed for viewing by one or more people;

means for projecting a calibration image onto a calibration area of the display

surface when the principal image is not projected onto the calibration area;

means for receiving a reflection from the display surface of the projected

calibration image;

means for comparing the received calibration image to the calibration image

projected to determine an observed difference; and

means for modifying projection of the principal image based on the observed

difference.

Page 10 -

AMENDMENT AFTER FINAL

Serial No. 10/608,971

HP Docket No. 200207145-1

40. (Currently Amended) A storage medium readable by a processor, having embodied therein a program of commands executable by the processor to:

project a principal image onto a <u>display surface, the</u> display surface disposed for viewing by one or more people;

project a calibration image onto a calibration area of the display surface when the principal image is not projected onto the calibration area;

receive a reflection from the display surface of the projected calibration image;

compare the calibration image received to the calibration image projected to determine an observed difference; and

modify projection of the principal image based on the observed difference.

41. (Currently Amended) An electronic device comprising:

a light engine apparatus configured to project a principal image and an intended calibration image onto a <u>display surface</u>, <u>the</u> display surface disposed for viewing by one or more people, where a portion of the intended calibration image has an intended first color characteristic; and

an optical unit configured to receive a reflection from the display surface of the displayed image of the projected calibration image;

the light engine apparatus and the optical unit cooperating to:

project the calibration image onto a calibration area of the display surface when the principal image is not projected onto the calibration area;

Page 11 - AMENDMENT AFTER FINAL Serial No. 10/608,971 HP Docket No. 200207145-1 KH Docket No. HPCC 393 determine an actual color characteristic for a portion of a reflection from the display surface of the displayed calibration image corresponding to the portion of the calibration image;

calculate a difference between the intended and actual color characteristics; and modify projection of the principal image based on the calculated difference.
